Buses Replace Midday and Weekend Trains on the Pascack Valley Line for Most of June

Beginning Saturday, June 4 and continuing through Sunday, June 26, buses will replace Pascack Valley Line trains between Spring Valley and Secaucus Junction on weekdays in the midday and each weekend beginning with the last Hoboken departure Friday night and through the last Hoboken departure Sunday night.

On the four weekends that busing is in effect, Metro-North customers from Spring Valley, Nanuet and Pearl River may use their monthly or weekly commutation tickets for travel on Metro-North's Hudson Line between Tarrytown and Grand Central Terminal. (Customers should check with the Village of Tarrytown, which charges for parking, or drive to Irvington, where Metro-North controls parking and it is free on weekends.)

During this 22-day period, NJ TRANSIT personnel will upgrade several at-grade crossings and perform track maintenance. During this work, about 480 Metro-North customers will be affected each weekend and about 165 each weekday.

Buses will operate between Spring Valley and Secaucus Junction, where connecting rail service to/from New York and Hoboken will be available. Buses also will operate in local and express segments (except the 12:45 a.m. departure on weekends, which will be served by one bus making all stops).

A special bus timetable will be in effect and certain Secaucus-bound buses may operate up to 10 minutes earlier than scheduled train departure times on Saturday and Sunday mornings. For exact bus schedules, visit: [njtransit's website](#).

NJTRANSIT will attempt to maintain train connections at Secaucus, but they cannot be guaranteed. So customers should allow an additional 30-to-60 minutes travel time. To avoid delays, Pascack Valley Line customers may wish to travel via the Main/Bergen County Line.

Customers traveling locally between outlying stations on the Pascack Valley Line may need to travel to Secaucus and then transfer to an outbound bus to reach their destination. There will be no direct connection between the different bus segments.
