### MTA Releases Video on Proper Use of Bicycle Racks Available Today on S53, S93 Routes

MTA New York City Transit has added bicycle racks on two Staten Island bus routes, the first time that such equipment has been made available for public use on NYC Transit. Customers can view a video on how to properly load and remove a bicycle from a rack at <https://youtu.be/Hdypg1tC-TE>.

The yearlong Bike & Ride pilot rolls out on the S53 and S93 routes, which run between Staten Island and the Bay Ridge section of Brooklyn over the Verrazano-Narrows Bridge. The two lines were chosen for their safe access to current and planned bicycle paths, ridership and routes, which serve a major college campus where bicycling is a popular commuting option.

The bike racks have been installed on a dedicated fleet of buses that serve the two routes. During the pilot, NYC Transit will test the use of three types of front-mounted racks, each of which can fit up to two non-collapsible conventional bicycles. The racks have a mechanism that secures the bicycle in place during transit. Customers are responsible for loading and unloading their own bicycles by following instructions that are affixed to the racks.

Over the course of the pilot, NYC Transit will study the feasibility of continuing and/or expanding the program to other boroughs by looking at any impacts on service, safety, fleet maintenance, training, operations, costs and legal issues. A test run in March was conducted with no major issues, though managers noted possible locations with tight turns along the routes and the inability to machine-wash the fronts of buses as potential safety and maintenance issues, which are being addressed.

The racks are free to use and available on a first-come, first-serve basis. Customers who wish to transport their bicycles must wait for a bus with an available rack. There is no age restriction on usage but the customer must be able to load and unload the bicycle safely and securely, and parents or guardians are asked to use caution when allowing minors to use the racks. Any customer who cannot safely operate the bicycle rack may be restricted from using the service.

NYC Transit has purchased a total of 38 racks at a cost of \$42,000. The S53, the second busiest bus route on Staten Island, serves an average of 10,100 customers on an average weekday. The S93 route has an average weekday ridership of 3,250 customers.
