HOW TO READ A ROUTE PROFILE

Route Characteristics:

- **Route Type** – indicates whether the route is Local, Limited, Select Bus Service (SBS), or Express.
- **Route Length** – the route's one-way mileage.
- **Turns per Mile** – the average turns per mile along the route.
- **Stop Spacing** – the average distance between any two sequential stops along the route, excluding non-stop segments on Express routes. If a route has both Local and Limited trips, only the Local stop spacings are considered.
- **Average Speed** – the average weekday travel speed for the route.

Ridership Charts*: shows average weekday ridership by stop (boarding and alighting) and passenger load estimates.**

- Charts show the most common route variant and major branches.
- Figures along the x-axis correspond to the timepoints displayed on the route map.
- Passenger boardings and alightings are shown in bars, corresponding to the left Y-axis.
- Passenger loads (the number of people on the bus at once) are shown in continuous line charts, corresponding to the right Y-axis.

Route Name and Descriptor

Route Map:
displays the route travel path and timepoints which correspond to the ridership charts.

CJTP (%)	71.9		--		--	

Frequency Chart: shows the scheduled headway of the route by hour, for weekdays, Saturdays, and Sundays (see key below the chart).

Transfer Chart*: shows the proportion of transferring passengers to/from other bus routes, to/from the subway, and non-transferring passengers.

Route Metrics*: displays key performance indicators for weekdays, Saturdays and Sundays.

The quartile charts specify the route's rank in each indicator, as compared to all other routes in the Brooklyn bus network; the median (50th percentile) is represented by the middle tick marks, best-performing routes are placed at the right portion of the charts, and worst-performing routes are to the left.

- **Daily Ridership** – the average daily number of unlinked passenger boardings. "Unlinked" means that one person may be counted more than once, for example if they make a round trip over the course of the day.
- **Riders per Revenue Hour** – measures the number of unlinked passenger boardings generated for each hour a bus is in service.
- **Riders per Trip** – measures the number of unlinked passenger boardings generated for each trip operated in service.
- **CJTP (Customer Journey Time Performance)** – the percentage of customers whose trips are completed within five minutes of the scheduled time. CJTP considers both how long customers wait at the bus stop beyond what they would have if their bus arrived on time, as well as how long customers spend on the bus beyond what they would have if the bus completed its trip in the time allotted in the schedule.
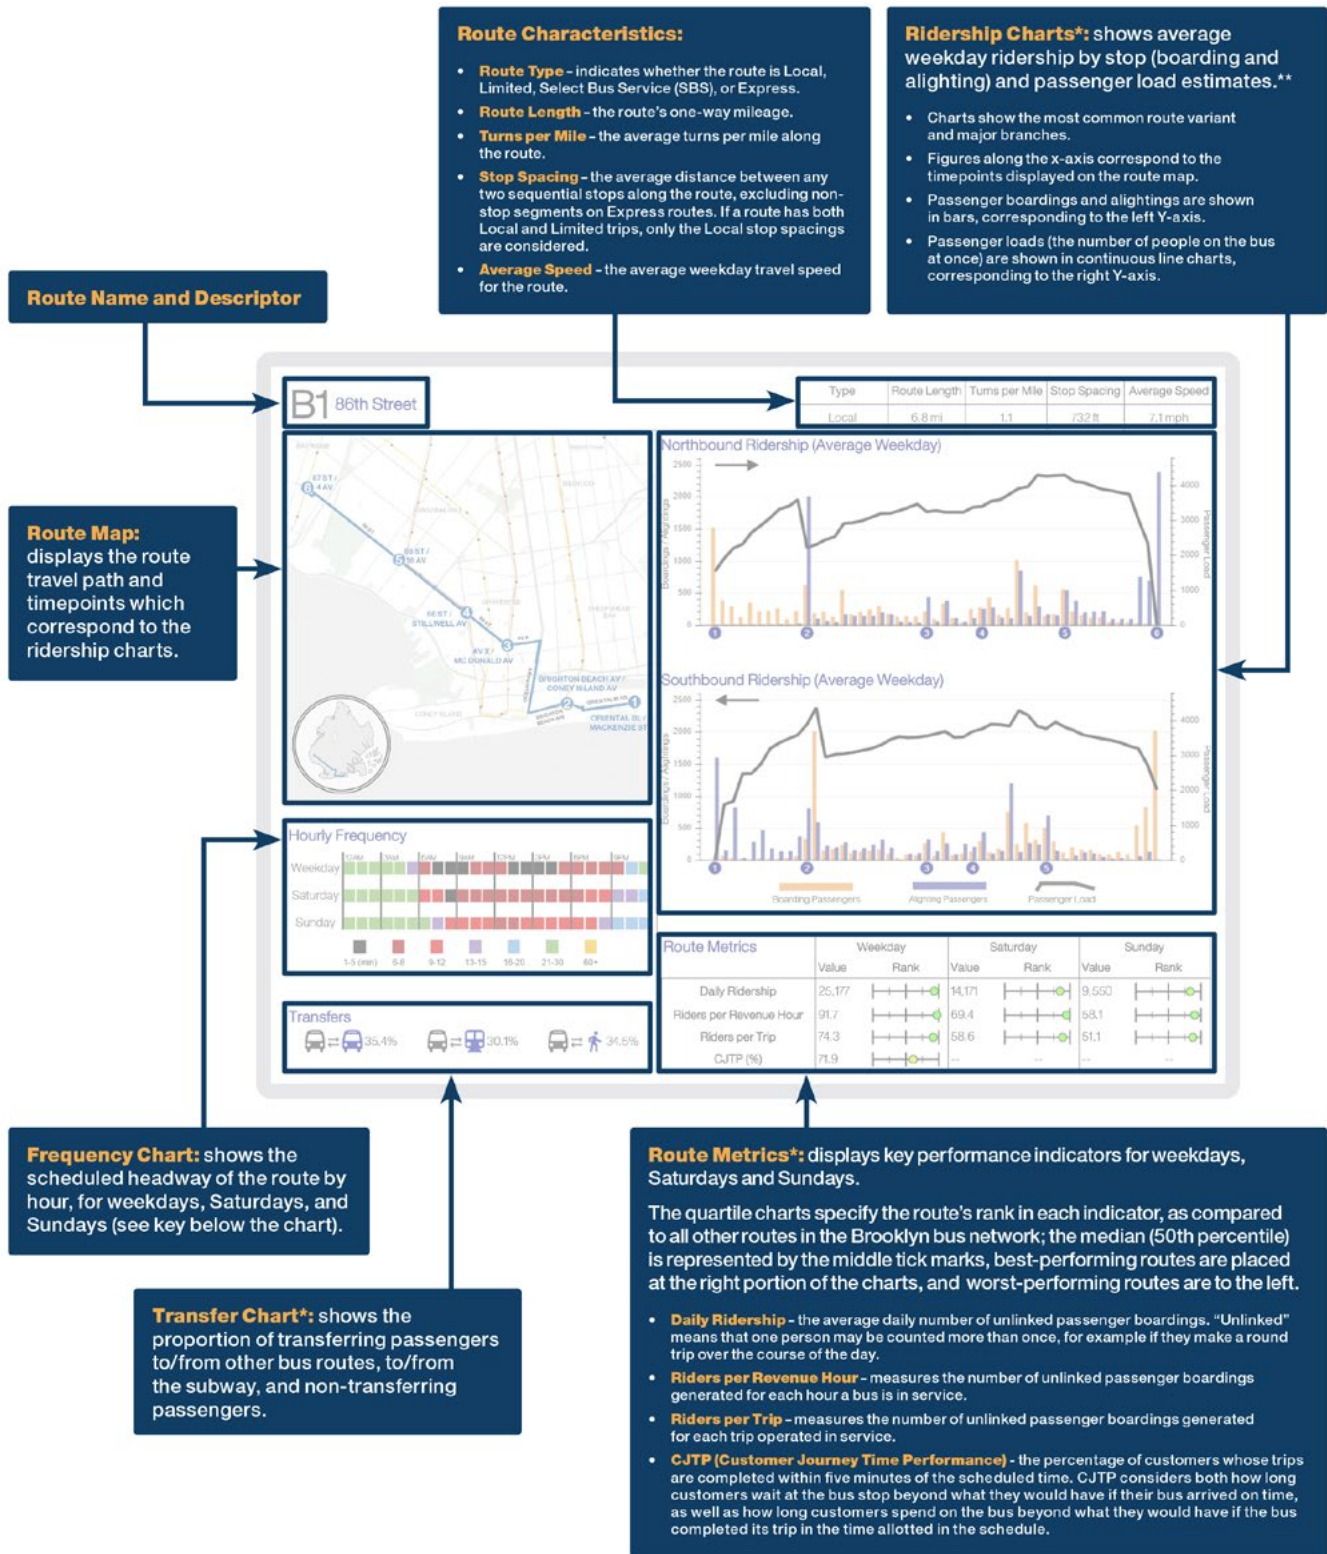

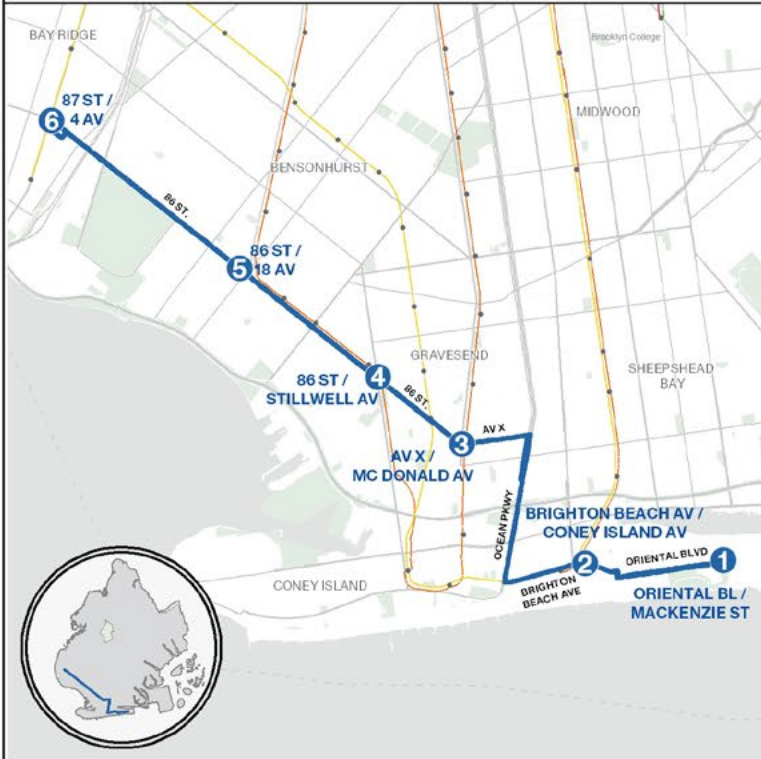

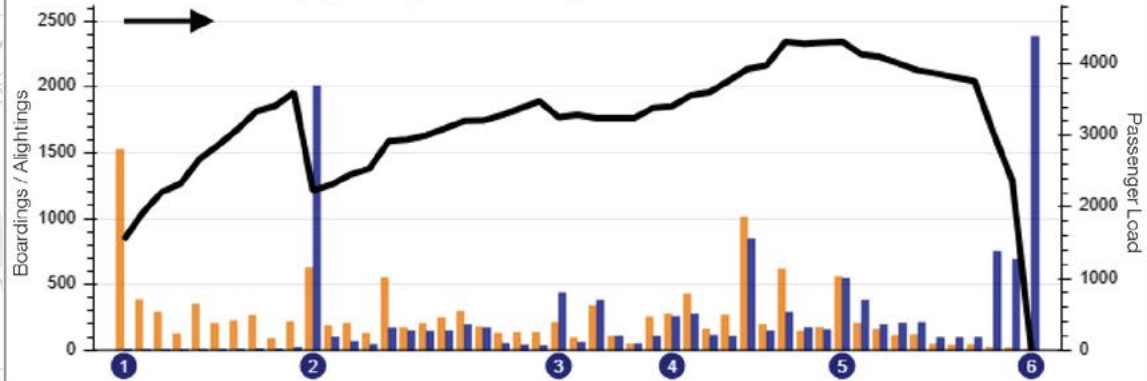

* All data is from the MTA and is from May 2019.

** All boarding, alighting, and loading estimates are derived from the NYCT Bus Ridership Model. The model accounts for MetroCard fare registrations and GPS data on bus locations; it has been calibrated to match observed conditions, considering fare evasion, children under 44", and other riders not paying with MetroCard. As with all models, some inherent uncertainty and ridership activity may diverge from what is observed, particularly at the individual stop level. This is due to the 6-minute interval for MetroCard transaction data downloads, as many stops are closer than 6 minutes apart. Boarding, alighting, and loading estimates at or near terminals may be subject to further uncertainty, as riders may board before an operator turns on bus and sets the farebox for the departure trip.
