## 1.0 EXECUTIVE SUMMARY

STV Incorporated (STV) was retained by Metropolitan Transportation Authority Construction & Development (MTA C&D) to perform a Phase I Environmental Site Assessment (ESA) of the proposed substation located on West 28<sup>th</sup> Street between 8<sup>th</sup> and 9<sup>th</sup> Avenue in New York, New York 10001 (the “Site”). STV’s assessment was conducted in connection with MTA C&D’s planned development of the Site with a substation for the purpose of providing additional power to the A/C/E subway service between West 13<sup>th</sup> Street and West 53<sup>rd</sup> Street to allow for operation of the subway under a future Communications Based Train Control (CBTC) operations and under contingency service (the “Project”). The Phase I ESA described in this report was prepared in accordance with the scope and limitations of the ASTM International (ASTM) E 1527-13 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E 1527-13)*. Limiting conditions and/or deviations from the ASTM E 1527-13 standard are described in Sections 7.1 and 2.3 of this report, respectively.

The Site is located in New York County (Manhattan), New York, in the Chelsea neighborhood, as shown on *Figure 1*. West 28<sup>th</sup> street is an eastbound residential street that curves to the north approximately 125 feet east of the 9<sup>th</sup> Avenue intersection, and then curves to the south at approximately the same distance from the 8<sup>th</sup> Avenue intersection.

The Site encompasses the New York City Department of Transportation (NYCDOT) road bed along West 28<sup>th</sup> Street and the adjacent sidewalk. The existing right-of-way in this location is approximately 70 feet wide, encompassing two 10-foot sidewalks, two 12-foot travel lanes, and two 13-foot parking lanes.

The Site is adjoined to the north and south by the Penn South (also known as The Mutual Redevelopment Houses, Inc.), which consists of landscaped areas to the north and southeast, and mid-rise residential buildings to the east and southwest. The Site is located in a densely developed area of Manhattan and is surrounded primarily by low- to high-rise residential and commercial development. The A/C/E subway tunnel runs north/south beneath 8<sup>th</sup> Avenue and Pennsylvania Station and Madison Square Garden are located three blocks north of the Site.

The regional topography slopes downward toward the southwest. Based on a review of the United States Geological Survey (USGS) 7.5-Minute Quadrangle Map (Brooklyn, NY 2013) and information contained in the regulatory agency database search report, the elevation of the Site property is approximately 29 feet above mean seal level (amsl). Based on information obtained from previous reports, groundwater is expected to be encountered at approximately 14 feet below ground surface. Based on surface topography, groundwater is expected to flow to the southwest.

As a result of this Phase I ESA, including but not limited to STV’s visual observation of the Site; review of historical information, environmental databases, and information provided by the User; interviews with current Site representative(s); and STV’s professional judgement, the following recognized environmental conditions (RECs), controlled RECs (CRECs), and/or historical RECs (HRECs), as defined by the ASTM E 1527-13 standard were identified:

### On-Site RECs

- Structures were present on the Site, which were demolished. Historic fill of unknown origin and suspect buried structures have potential to impact the Site.

Off-Site RECs

- Historic presence of nearby properties that were utilized for publishing and printing, woodworking, manufacturing (i.e., buckle factory, iron works), as paint shops, furriers, facilities utilized for “junk”, and as garages with gasoline tanks.
- Historic dry cleaners (“ES Cleaners”, “Penn House Cleaners” and “New York School of Dry Cleaning”) and a registered dry cleaners (“Penn House Cleaners”) located in close proximity to the Site, including one, “New York School of Dry Cleaning”, which was listed in the New York Spills database for releases of dry cleaning chemicals; in the Resource Conservation and Recovery Act (RCRA) Small Quantity Generator (SQG), New York and Rhode Island Manifest, Facility Index System/Facility Registry System (FINDS), Enforcement and Compliance History Information (ECHO), and Integrated Compliance Information System (ICIS) databases for hazardous solvent waste generation and with compliance violations; and has an environmental (“E”) zoning designation requiring environmental investigation.
- The historic presence of a lead smelter (“Tottenville Copper Co.”) located in close proximity to the Site.

This Executive Summary is part of this complete report; any findings, opinions or conclusions in this Executive Summary are made in context with the complete report. STV recommends review of the entire report for all supporting information related to findings, opinions, and conclusions.

## 2.0 INTRODUCTION

This report summarizes the results of the Phase I Environmental Site Assessment (ESA) of the proposed substation located on West 28<sup>th</sup> Street between 8<sup>th</sup> and 9<sup>th</sup> Avenue in New York, New York 10001 (hereafter referred to as the “Site”). The Site is located in New York County (Manhattan), New York, in the Chelsea neighborhood, as shown on *Figure 1*. West 28<sup>th</sup> street is an eastbound residential street that curves to the north approximately 125 feet east of the 9<sup>th</sup> Avenue intersection, and then curves to the south at approximately the same distance from the 8<sup>th</sup> Avenue intersection. The Site encompasses the New York City Department of Transportation (NYCDOT) road bed along West 28<sup>th</sup> Street and the adjacent sidewalk. The existing right-of-way in this location is approximately 70 feet wide, encompassing two 10-foot sidewalks, two 12-foot travel lanes, and two 13-foot parking lanes. The Site is located between Tax Blocks 751 and 752. STV understands that MTA C&D requires this Phase I ESA in support of their planned development of the Site with a substation for the purpose of providing additional power to the A/C/E subway service between West 13<sup>th</sup> Street and West 53<sup>rd</sup> Street to allow for operation of the subway under a future Communications Based Train Control (CBTC) operations and under contingency service (the “Project”). The Project will consist of excavation to approximately 32 feet below ground surface (bgs) and construction of a below ground substation.

### 2.1 Selected Definitions

The following terms are used throughout this report and, for the purpose of clarity, corresponding definitions are provided. These terms are fully defined in ASTM International (ASTM) International E 1527-13.

Controlled Recognized Environmental Condition (CREC) – A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority) with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Environmental Professional – A person meeting the education, training, and experience requirements as set forth in 40 CFR § 312.10(b), necessary to conduct a site reconnaissance, interviews, and other activities in accordance with this practice, and from the information generated by such activities, having the ability to develop opinions and conclusions regarding conditions indicative of releases or threatened releases on, at, in, or to a property, sufficient to meet the objectives and performance factors in 40 CFR § 312.20(e) and (f).

Historical Recognized Environmental Condition (HREC) – A past release of any hazardous substances or petroleum products that occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Recognized Environmental Condition (REC) – The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or, (3) under conditions that pose a material threat of a future release to the environment.

Vapor Encroachment Condition (VEC) – The presence or likely presence of chemical of concern vapors in the subsurface of the target property caused by the release of vapors from contaminated soil or groundwater or both, either on or near the target property.

## **2.2 Purpose and Scope**

The purpose of this assessment is to identify RECs, CRECs, VECs, and certain other environmental issues or concerns as they existed at the Site at the time of the Site visit. The assessment is intended to identify conditions that would have the potential to impact the development and use of the Site. The assessment was also conducted for purposes of environmental due diligence to qualify for the innocent landowner, a bona fide prospective purchaser, or a contiguous property owner defense under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The Phase I ESA included, but was not limited to an assessment of the following potential environmental issues: current and historical Site usage; current and historical usage of adjoining properties; regulatory agency records review; on-Site solid waste management and disposal practices; and, on-Site hazardous materials and petroleum products management.

This evaluation was conducted by qualified environmental professionals utilizing a standard of good commercial and customary practice in accordance with ASTM E 1527-13. The scope of work completed for this evaluation meets the requirements of ASTM E 1527-13 and includes the following:

- Documenting the physical characteristics of the Site through a review of available topographic, geologic, wetland, flood plain, groundwater data, and Site observations.
- Researching the Site history through a review of reasonably ascertainable standard sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports, and interviews.
- Documenting current Site conditions, via observations and interviews, regarding the presence or absence of hazardous substances/petroleum products; the generation, treatment, storage, or disposal of hazardous, regulated, or medical wastes; the presence of electrical equipment that utilizes oils which potentially contain PCBs; and, the presence of storage tanks (above and below ground), floor drains, drains that discharge to subsurface, former septic tanks, and drywells.
- Determining the usage of adjoining and nearby properties to identify the likelihood for environmental conditions (if present and/or suspected) and concerns to migrate onto the Site.
- Evaluating information contained within Federal and State environmental databases and other local environmental records, within specific search distances.

## **2.3 Additions, Deviations, Deletions, Data Failures, and Data Gaps**

No environmental issues that are outside the scope of ASTM E 1527-13 were evaluated.

The following deviations, data gaps, and deletions from ASTM E 1527-13 were necessary in conducting this assessment:

- The Site area history was not conducted in five-year intervals.
- There were no interviews with current or historic Site owners conducted as part of the Phase I ESA.

Sufficient information about the history of the Site and surrounding area could be obtained from the available historical Sanborn Maps, aerial photographs, city directories, and local records, and the data gaps identified above are not likely to alter the conclusions of this report.

## **2.4 Limitations and Exceptions**

STV has prepared this Phase I ESA using reasonable efforts in each phase of its work to identify RECs associated with hazardous substances, wastes, and petroleum products at the Site. The methodology of the Phase I ESA was consistent with the ASTM E 1527-13. Findings within this report are based on information collected from observations made on the day of the Site investigation and from reasonably ascertainable information obtained from governing public agencies and private sources.

This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other construction purposes. STV makes no representation or warranty that the past or current operations at the Site are, or have been, in compliance with all applicable Federal, State and local laws, regulations and codes.

Regardless of the findings stated in this report, STV is not responsible for consequences or conditions arising from facts that were concealed, withheld, or not fully disclosed at the time the evaluation was conducted.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

The regulatory database report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The report focuses on the Site and neighboring properties that could impact the Site. Neighboring properties listed in governmental environmental records are identified within specific search distances. The search distance varies depending upon the particular government record being checked. The regulatory research is designed to meet the requirements of ASTM E 1527-13. The information provided in the regulatory database report is assumed to be correct and complete.

## **2.5 Continued Validity and User Reliance**

This report is presumed to be valid, in accordance with, and subject to, the limitations specified in the ASTM E 1527-13 standard, for a period of 180 days from the earliest records utilized to prepare the report, until the Client obtains specific information that may materially alter a finding, opinion, or conclusion in this report, or until the Client is notified by STV that it has obtained specific information that may materially alter a finding, opinion, or conclusion in this report. Additionally, pursuant to the ASTM E 1527-13 standard, this report is presumed valid if the earliest records relied on to complete the report were obtained less than 180 days prior to the date of acquisition of the property or (for transactions not involving an acquisition) the date of the intended transaction.

### **3.0 SITE DESCRIPTION**

The Site is located along West 28<sup>th</sup> Street between 8<sup>th</sup> and 9<sup>th</sup> Avenue in New York, New York 10001, in a mixed residential and commercial area. The Site is described by the New York City tax assessor as the roadway between Blocks 751 and 752, is zoned residential (R8), and is currently owned by the City of New York. A Site location map is included as *Figure 1*. The Zoning Map (8d) is included in *Appendix A*.

#### **3.1 Site Improvements**

The Site is located in New York County (Manhattan), New York, in the Chelsea neighborhood, as shown on *Figure 1*. West 28<sup>th</sup> street is an eastbound residential street that curves to the north approximately 125 feet east of the 9<sup>th</sup> Avenue intersection, and then curves to the south at approximately the same distance from the 8<sup>th</sup> Avenue intersection.

The Site encompasses the NYCDOT road bed along West 28<sup>th</sup> Street and the adjacent sidewalk. The existing right-of-way in this location is approximately 70 feet wide, encompassing two 10-foot sidewalks, two 12-foot travel lanes, and two 13-foot parking lanes. A Site Plan is included as *Figure 2*.

#### **3.2 Current and Historical Site Use**

##### *3.2.1 Current Site Use(s)*

The Site is currently a public street and sidewalks.

##### *3.2.2 Previous Owner and Operator Information*

The Site has been occupied as a public street, owned by the City of New York, since at least 1962. No previous ownership information was available for the Site. Historical Site ownership and operator information is based on information provided by the User, the historical record review, and/or interviews conducted during this Phase I ESA.

#### **3.3 Physical Setting**

##### *3.3.1 Topography and Hydrogeology*

Based on a review of the United States Geological Survey (USGS) topographic map, Brooklyn, New York quadrangle dated 2013 (*Figure 1*), the Site is located 0.68 miles northeast of the Hudson River, the Site topographic elevation is approximately 29 feet above mean sea level (amsl), and local topography slopes downward to the southwest. The topographic downward slope observed at the Site during the Site reconnaissance was generally toward the southwest. Based on local topography, the direction of shallow groundwater flow is expected to be southwesterly, towards the Hudson River; however, a subsurface investigation would be required to determine actual groundwater flow direction.

A Boring Report dated November 20, 2017 was prepared by Aquifer Drilling and Testing, Inc. (ADT) for MTA NYCT in support of the Project (“Boring Report”). MTA NYCT provided the Boring Report to STV for review as part of the Phase I ESA. According to the Boring Report, groundwater was present in two of the borings at depths of approximately 14 feet bgs. The Boring Report is presented in *Appendix A*.

The Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) for the Site area (Community Panel Number 3604970201F) was reviewed to assess whether the Site is located within a

designated flood plain or flood zone. The Site is located in Zone X, an area outside of the 0.2% annual chance flood zone. A copy of the FIRM map for the Site area is included in *Appendix A*.

### 3.3.2 *Geology and Soil Composition*

Manhattan is underlain by intensely folded and faulted metamorphic rocks. These rocks range in age from lower Paleozoic (Ordovician & Cambrian; 500-545 million years [Ma]) to latest Proterozoic (545-1,000 Ma) and consist of three formations (from oldest to youngest): the Fordham Gneiss, Inwood Marble, and Manhattan Schist. Together they comprise the New York City Group. The gneiss represents the old, Grenvillian basement (about 1,000 Ma) of Laurentia (ancestral North America) whereas the schist and marble were originally sedimentary rocks deposited on the seafloor of the ancient Iapetus Ocean (the ocean which existed prior to the Atlantic). Radiometric cooling ages indicate that most of the metamorphism is related to the Taconic orogeny (mid to late Ordovician) with isotopic 'resetting' occurring during the Acadian orogeny (mid to late Devonian). The topography of Manhattan is in large part controlled by the plunging brows and crests of these three rock types.

The GeoCheck Physical Setting Source Addendum to the regulatory agency database report supplied by Environmental Data Resources, Inc. (EDR) of Milford, Connecticut (refer to *Appendix B*) was reviewed to obtain information regarding the dominant soil composition in the Site vicinity. The soil in the area of the Site is described as Urban Land. Urban Land refers to soils that have been altered by human activities thus making them unidentifiable. Typically, these soils have been mixed with other materials, such as brick and concrete (historic fill), and characteristics can only be determined by on-site investigation. Additionally, other surficial and shallow soil types in the area of the Site consist of sandy loam. Sandy loam refers to a soil that's made of sand, silt, and clay.

According to the November 20, 2017 Boring Report prepared by ADT, fifteen borings were advanced along the northern and southern perimeters of the Site. Fill material generally consisting of gray, brown, and reddish brown sand, medium gray gravel, silt, brick, and asphalt was encountered in borings from the ground surface (beneath concrete or asphalt cover) to maximum depths ranging from 8 to 20 feet bgs. Underlying native material generally consisted of medium brown sand, gravel, and trace silt followed by silt, silty sand, and clayey silt. Slightly weathered to weathered bedrock with fractures (Manhattan Schist) was encountered at depths ranging from 25 to 35 feet bgs. The Boring Report is provided in *Appendix A*.

## **4.0 USER PROVIDED INFORMATION**

The ASTM User Questionnaire was provided to the User to obtain additional information about that Site that may assist in identifying RECs. Responses provided by the User are summarized below. The User Questionnaire is included in *Appendix C*.

- Other publically available information, as necessary.

Historical research documentation is included in *Appendix D*.

### 5.1 Site History

Historical Site uses are summarized in the following table:

Years	Description of Site History
1890 – 1950	The earliest record available (1890 Sanborn Map) depicts lot boundaries in the vicinity of the Site. The eastern portion of the Site was developed with portions of three to four five-story buildings. The buildings are depicted on the 1899 Sanborn Map as four-story buildings and on the 1911 Sanborn Map as residential four-story buildings with basements. Additionally, a portion of one building was utilized as a stable.
1950 – 1961	The 1950 Sanborn Map depicts the structures located on Site as five-story residences. Additionally, the stable was razed and a five-story structure was constructed.
1961 – 1962	The previously depicted structures were razed and the Site is undeveloped. Soil disturbance/grading of the Site in support of area redevelopment is apparent.
1962 – Present	According to the 1962 Board of Estimate document (refer to Appendix A), as part of development of the Mutual Redevelopment Houses (Penn. Station South, I. L. G. W. U. Houses), the path of 28 <sup>th</sup> Street was redirected. The footprint of West 28 <sup>th</sup> Street, which was formerly south-adjacent to the Site, was constructed as a curved street that traverses the Site. Therefore, the Site consists of an asphalt-paved public road ("West Twenty-Eighth Street") and concrete sidewalks. The redeveloped area in the vicinity of the Site consists of landscaped areas, mid-rise residences, and is labeled "Penn. Station South, I. L. G. W. U. Houses" on Sanborn Maps between 1976 and 2005 (i.e., most recent Sanborn Map).

It does not appear that topographic contours in the Site area have significantly changed during the time period reviewed.

### 5.2 Adjoining Property History

Historical uses of adjoining properties are summarized in the following table:

Years	Description of Adjoining Property History
1890 – 1961	The earliest record available (1890 Sanborn Map) depicts lot boundaries in the vicinity of the adjoining properties to the Site. Additionally, five-story buildings were present on adjoining properties to the east, south, and southwest, followed by a public street (West 28 <sup>th</sup> Street), and four-story buildings were present on adjoining properties to the north and northeast, followed by a public street (West 29 <sup>th</sup> Street). The buildings on the east, south, and southwest-adjoining properties are depicted on the 1899 Sanborn Map as four-story buildings and on the 1911 Sanborn Map as four-story residences with basements. Additionally, the buildings on the north and northeast adjoining properties are depicted on the 1899 Sanborn Map as three-story buildings and on the 1911 Sanborn Map as three-story residences with basements.
1961 – 1962	Structures present on adjoining properties were razed by 1961 during redevelopment of two adjacent city blocks with “Penn. Station South, I. L. G. W. U. Houses.” Land disturbance (i.e., regrading of the adjoining properties) is evident in the 1961 aerial photograph and the former public street (West 28 <sup>th</sup> Street) was no longer present at this time. Additionally, adjoining properties to the east and southwest were being developed with mid-rise residential buildings.
1962 – Present	According to the 1962 Board of Estimate document (refer to Appendix D), as part of development of the Mutual Redevelopment Houses (Penn. Station South, I. L. G. W. U. Houses), the path of 28 <sup>th</sup> Street was redirected. The footprint of West 28 <sup>th</sup> Street, which was formerly south-adjacent to the Site, was constructed as a curved street that traverses the Site. By 1974, the adjoining properties to the north, southeast, and northwest consisted of landscaped areas with concrete walkways. Construction of the 22-story residential buildings to the east and to the southwest was complete and the buildings appeared to have been occupied.

### 5.1 Surrounding Property History

Based on review of the earliest historical records, the Hudson River is located approximately 0.6 miles west and southwest of the Site. The area in the vicinity of the Site was densely developed, roads were arranged in a grid-like structure (8<sup>th</sup> Avenue located to the east of the Site and 9<sup>th</sup> Avenue located to the west of the Site), and surrounding properties were improved with residential buildings. A description of additionally surrounding property history is summarized in the following table.

Direction	Description of Surrounding Property History
North	<ul style="list-style-type: none"> <li>• A railroad station (Pennsylvania Station) has been present approximately three blocks north of the Site since 1905.</li> <li>• An indoor arena (Madison Square Garden) was constructed adjacent to Pennsylvania Station in 1925.</li> <li>• A medical facility, “French Hospital,” was constructed approximately one block north of the Site in 1928 and was converted to apartments in approximately 1980.</li> <li>• “Rural Publishing Co. Printing and Publishing” was located north of the Site from at least 1930 to 1950.</li> <li>• A U.S. Post Office “Central Mail Facility” has been located approximately 1/8 mile northwest of the Site since 1950. A facility identified as “Paints” was located approximately one block northeast of the Site.</li> </ul> <p>There have been no significant changes to surrounding properties located north of the Site since approximately 1980.</p>

Direction	Description of Surrounding Property History
<p style="text-align: center;"><b>South</b></p>	<ul style="list-style-type: none"> <li>• Between 1890 and 1930, properties located one to two blocks southwest of the Site were occupied by a carpenter and builder’s shop, stables, a buckle factory, and an iron works facility.</li> <li>• Between 1930 and 1950, properties located southwest of the Site were occupied by “Gimble Bros” fur storage; a garage with gasoline tanks; “Coca-Cola”; a carpenter; a woodworker, and a building identified as “junk”.</li> <li>• By 1950, properties located southwest of the Site that were previously improved with residential structures were redeveloped with a multi-lot building with a garage with gasoline tanks. Also, a formerly vacant six-story building with a basement was occupied by “Triangle Publications Inc. ## 5.2 Other Historical Sources

### 5.2.1 Previous Environmental Reports

The following report was provided to STV for review as part of the Phase I ESA:

*Boring Report, prepared by Aquifer Drilling and Testing, Inc. (ADT) for MTA NYCT, dated November 20, 2017*

According to the November 20, 2017 Boring Report prepared by ADT, fifteen borings were advanced along the northern and southern perimeters of the Site. Fill material generally consisting of gray, brown, and reddish brown sand, medium gray gravel, silt, brick, and asphalt was encountered in borings from the ground surface (beneath concrete or asphalt cover) to maximum depths ranging from 8 to 20 feet bgs. Underlying native material generally consisted of medium brown sand, gravel, and trace silt followed by silt, silty sand, and clayey silt. Slightly weathered to weathered bedrock with fractures (Manhattan schist) was encountered at depths ranging from 23 to 36 feet bgs. According to the Boring Report, two borings were converted to monitoring wells and groundwater was encountered at a depth of approximately 14 feet bgs.

*5.2.2 Historical Use Interviews*

There were no historical use interviews conducted during the performance of this Phase I ESA.

## 6.0 ENVIRONMENTAL RECORD REVIEW

A database search report that identifies properties listed on state and federal databases within the ASTM-required radii of the Site was obtained from EDR and is included in *Appendix B*.

The environmental database report identified 781 listings. These properties included those that could be mapped and those that could not (i.e., orphan properties). The Site and adjoining properties were not listed in the database search report.

### 6.1 Site Record Review

The Site was not listed in the regulatory agency database report.

### 6.2 Adjoining Property Record Review

No adjoining properties are listed in the regulatory agency database report.

### 6.3 Surrounding Property Record Review

The following factors were evaluated with respect to the potential for contaminant migration to the Site from surrounding properties to determine whether a summary of the regulatory agency database listing should be included in this report:

- Location of the property compared to the Site vis-à-vis groundwater migration based on the local topography and the assumed groundwater depth and southwesterly shallow ground water flow direction;
- Location of the property compared to the Site vis-à-vis vapor migration based on readily available information pursuant to the ASTM E 1527-13 standard including soil and geological characteristics; contaminant characteristics; contaminated plume migration data; and significant conduits that might provide preferential pathways for vapor migration such as major utility corridors, sanitary sewers, storm sewers, and significant natural conduits (e.g., Karst terrain);
- Status of listing (e.g., whether the New York State Department of Environmental Conservation [NYSDEC] has issued a No Further Action letter [or other similar closure document]);
- Type of database and whether the presence of contamination is known; and
- The distance between the listed property and the Site.

Based on this evaluation, the review of additional environmental records has been limited to the properties listed below, since contamination at the other properties identified by the regulatory agency database report is considered unlikely to migrate to the Site and, therefore, unlikely to impact the environmental integrity of the Site.

The facility was later identified as a conditionally exempt small quantity generator (CESQG) in 2006. Additionally, waste disposal manifest documentation for shipments of solvent waste during each year between 1993 and 2013 (except 2010) is presented in the RI and NY Manifest databases. The FINDS, ECHO and ICIS database listings pertain to the hazardous waste and compliance violations associated with this facility. Furthermore, “Penn House Cleaners” is identified in the EDR Historic Cleaner database, operating from 1977 to 1987.</p>

Several orphan listings are located in the surrounding area to the Site. Based on the description of their locations and the nature of the database, the following site may have an impact on the environmental integrity of the Site:

Site Name	Site Address	Database	Description
Tottenville Copper Co.	West 29 <sup>th</sup> Street	SEMS-Archive, Lead Smelters	This site is listed in the regulatory agency database report as a Lead Smelter Site (Site ID No. 0206666) and in the Superfund Enterprise Management System (SEMS)-Archive database. Although the exact location is unknown, potential emissions from the nearby historical lead smelter may have impacted the soil quality at the Site.

#### 6.4 Federal, State, and Local Agencies Contacted

## 7.0 SITE RECONNAISSANCE

### 7.1 Methodology and Limiting Conditions

The inspection of the Site included observations of the property and surrounding area (Site reconnaissance) that were made to identify potential sources or indications of hazardous substances, including: ASTs; underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain PCBs; waste storage areas; hazardous materials usage, storage, and disposal; stained surfaces and soils; stressed vegetation; leaks; and, odors. In addition, readily-observable portions of the properties immediately adjacent to the Site were viewed from public rights-of-way to identify or determine the likelihood of any of the aforementioned potential sources of contamination being present.

No limiting conditions were encountered during the Site reconnaissance.

### 7.2 Site Reconnaissance

Mr. Daniel Brockerhoff, Environmental Scientist, of STV performed a visual inspection of the Site and adjacent and surrounding areas on October 4, 2021. The weather during the inspection was cloudy and the temperature was approximately 60° F. Photographs taken during Site reconnaissance are included in *Appendix F*.

#### 7.2.1 Site Observations

The Site encompasses the NYCDOT road bed along West 28<sup>th</sup> Street and the adjacent sidewalk. The existing right-of-way in this location is approximately 70 feet wide, encompassing two 10-foot sidewalks, two 12-foot travel lanes, and two 13-foot parking lanes. *7.2.2 Adjoining Property Observations*

The Site is adjoined to the north and south by the Penn South (also known as The Mutual Redevelopment Houses, Inc.), which consists of landscaped areas to the north and southeast and mid-rise residential buildings to the east and southwest.

*7.2.3 Surrounding Property Observations*

The Site is located in a densely developed area of Manhattan and is surrounded primarily by low- to high-rise residential and commercial development. The A/C/E subway tunnel runs north and south beneath 8<sup>th</sup> Avenue and Pennsylvania Station and Madison Square Garden are located two blocks north of the Site.

## **8.0 INTERVIEWS**

No interviews were conducted as part of this Phase I ESA.

## 9.0 SUMMARY OF FINDINGS AND CONCLUSIONS

This report summarizes the result of the Phase I ESA of the property located on West 28<sup>th</sup> Street between 8<sup>th</sup> and 9<sup>th</sup> Avenue in New York, New York 10001 (portion of roadbed and sidewalks between Blocks 751 and 752).

The Site encompasses the New York City Department of Transportation (NYCDOT) road bed along West 28<sup>th</sup> Street and the adjacent sidewalk. The existing right-of-way in this location is approximately 70 feet wide, encompassing two 10-foot sidewalks, two 12-foot travel lanes, and two 13-foot parking lanes.

The Site was developed with low-rise residential row-homes from at least 1890 to approximately 1961 when the area that encompasses the Site underwent redevelopment for construction of the existing Penn South (also known as The Mutual Redevelopment Houses, Inc.). Since 1974 the Site was improved with the asphalt paved roadbed and concrete-paved sidewalks and curbs.

The surrounding area primarily consists of residential and commercial development.

The Site elevation is approximately 29 feet amsl. The topography within the immediate area of the Site slopes downward to the southwest. The depth to groundwater is estimated to be approximately 14 feet bgs. Depth to bedrock at the Site is approximately 25 to 35 feet bgs. According to the GeoCheck Physical Setting Source Addendum to the regulatory agency database report, the soil in the area of the Site is described as Urban Land and based on information obtained from previous reports, fill material is present at maximum depths ranging from 8 to 20 feet bgs.

STV has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-13. Any additions to, exceptions to, or deletions from this practice are described in Section Sections 2.3 and 7.1 of this report.

This Phase I ESA has revealed the following RECs, CRECS, and/or VECs associated with the Site:

### On-Site RECs

- Structures were present on the Site, which were demolished. Historic fill of unknown origin and suspect buried structures have potential to impact the Site.

### Off-Site RECs

- Historic presence of nearby properties that were utilized for publishing and printing, woodworking, manufacturing (i.e., buckle factory, iron works), as paint shops, furriers, facilities utilized for “junk”, and as garages with gasoline tanks.
- Historic dry cleaners (“ES Cleaners”, “Penn House Cleaners” and “New York School of Dry Cleaning”) and a registered dry cleaners (“Penn House Cleaners”) located in close proximity to the Site, including one, “New York School of Dry Cleaning”, which was listed in the New York Spills database for releases of dry cleaning chemicals; in the RCRA SQG, NY/RI Manifest, FINDS, ECHO, and ICIS databases for hazardous solvent waste generation and with compliance violations; and has an environmental (“E”) zoning designation requiring environmental investigation.
- The historic presence of a lead smelter (“Tottenville Copper Co.”) located in close proximity to the Site.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal NPL site list***

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 07/29/2021 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/29/2021 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2021 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are

### **State- and tribal - equivalent CERCLIS**

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/10/2021 has revealed that there are 3 NY SHWS sites within approximately 1 mile of the target property.

### **Other Ascertainable Records**

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 162 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

A review of the NY MANIFEST list, as provided by EDR, and dated 01/01/2019 has revealed that there are 240 NY MANIFEST sites within approximately 0.25 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 6 EDR MGP sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

**Summary Details:**

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated 1.1 million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million (ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabilize the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating

various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action at the remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for parties potentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

 DEC Memo: "02/26/15- Ahmed - DEC demeo responded to the site. 2/26/15 TJD Site inspection. Tank overflow during delivery by Approved Oil - no discharge from vent pipe. All product discharged out of manway inside tank vault. Tank is a 15K AST and lacks proper secondary containment. Product flowed from tank vault through weep holes and vault seepage onto boiler room floor and into building sumps. DEC required building personnel to turn off sump pumps and report impacts to NYCDEP. PTC was initially retained for cleanup but were dismissed from job by property owner due to inoperable equipment. All Boro was retained to complete cleanup. Tank vault was found to have an illegal sump with float operated pump which discharged to a second sump pit - also disconnected upon discovery. Ventilation equipment was installed to address nuisance petroleum odors from affecting residential/commercial properties. Tank was found to be bulging and DeMeo required tank be emptied pending further investigation including a required 10 year internal inspection. PBS NOV was issued. Inspection photos & NOV uploaded to DECDOCS. NYCDEP (Andrew Kelly) reported to have inspected property and issued a Commissioner's Order to clean affected sewers. 2/27/15 TJD Chris from All Boro called with

update. Cleanup was completed - his crews are onsite today and product (10 inches) has re-emerged into previously cleaned building sumps from unknown pathway. Remaining product has been transferred to a temp tank in roadway. DeMeo has required a full drainage and sub-surface investigation. 2/28/15: Mahat DEC Mahat received an email from Chris mentioning that he is performing sub-surface investigation. He is drilling the concrete floor and pumping the pits that flooded back with product. DEC is waiting on full delentionation report. 3/1/18 TJD File review. Financial dispute between Property Management Company and AllBoro Tank resulted in a significant delay in obtaining required closure report. Once dispute was resolved, a closure report was submitted by All Boro Tank in July 2017. The report was reviewed and deemed incomplete, as no groundwater monitoring data was provided. The management company retained a second contractor (PW Grosser) to document GW monitoring results - a report addendum was submitted in October 2017. Upon review of both documents, all required remedial/investigative work has been completed. A review of the laboratory reports for both soil/groundwater reveals concentrations of target analytes are within acceptable concentrations. No further action is required. All documentation has been uploaded to DECDOCS. Spill closed. "14,000 gal tank/spill contained to basement area and tank room/ unknown drain impacts at this time/investigation underway"

02/17/04: Reassigned from AUSTIN to KRIMGOLD. 11/16/05 - L. Alden - Review of Spill #0010303 showed that this same spill was reported twice. Remarks for #0010303 stated that cleanup was to start and that 50 gallons of oil were spilled and 50 gallons of oil were recovered. Rommel closed #0010303 on 1/9/01. Searched for M&B Oil and M B Oil in yellow pages and found no listing. Even if this spill were only marginally cleaned up (not likely with fire dept. and sanitation on the scene), the likelihood of there being a problem now is minuscule. Closed spill on 11/16/05."

Remarks: "ABOUT 25-50 GALS LEAKED SPILL IS CONTAINED AND TRUCK WAS OFF LOADED"

There has been at least one feeder taken out of service so far, but the correct feeder has not yet been found. The cleanup is still pending the proper feeder to be ID, the feeder to be deenergized and the D-Fault to be repaired so that M7175 will be safe to do the cleanup. Update 10-18-04 @ 12:48 As per b-ticket # me0415413, the leaking joint has been cut out and the ends are now sealed. The cleanup is to be scheduled for 23:00 tonight. Update 10-19-04 @ 12:45 S Falkowski #56406 reports that the cleanup is complete as of 12:45. 3 bags of ppe and debris generated from the cleanup. 250 gallons of oil and water mixed removed by tanker. Cleanup crew and supervisor are listed in the event involved person screen. Double washed with slix. Tag #38853 to remain in place pending wipe samples. D. Romano, UG West Planner, reported at 10:45 hrs. on 10/28/04 that when the Chemist went into the manhole to take the wipe samples he discovered some leaking cable ends and could not take the wipe samples. A discussion ensued between the Environmental Desk and Mr. Romano as to the plan of action. A decision was made to have the underground crew make the necessary repairs and perform a dry cleanup. For the cleanup the area affected would be double washed with a cleaning solution and wiped up with absorbent pads. Also absorbent granules could be used to absorb any oil and then picked up and disposed of as solid waste. Once the repairs are made and the manhole is cleaned, the Chemist will return to take the required samples. The plan is for the Chemist to return after lunch on 10/28/04. Update: 10/29/04 Ned S Mekhaiel O.S U.G reports that additional dry clean up was done. He reports that in process of chem. lab taking wipe samples, more cable oil was dripping from cable ends to concrete floor @ 10:25 hrs. A dry clean up was done and was complete @ 14:00 hrs In process one barrel of ppe and oil pads and absorbent used. Floor was dry washed twice with slix, and oil pads. Yellow tag 38853 remains in manhole pending wipe samples at this time. Clean up complete @ 14:00 hrs. Update: 11/1/04 @ 11:52 hrs. information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Simms #66618 reports that while investigating a transformer explosion @ vs4493 290 9 ave, he discovered 1/2 gallon of transformer oil had spilled onto the concrete sidewalk, a mailbox and an ambulance. Upon arrival of F Simms there was no smoke or fire involved. An emt worker was burned on the leg and neck and transported to the hospital. Police and fire department were on location. Transformer is on feeder #13m59. Environmental yellow tag # 35966 was applied. 2 samples are to be taken from the spill as soon as it is safe to enter the structure, chain of custody # aa21260. Further investigation can take place when it is safe to enter the structure. Feeder is not grounded at this time. Cleanup pending safe access. Lou First, Manhattan E,H&S reported at 12:50 hrs. that the I&A was on location and they estimated that there was approx. 30 to 40 gallons of oil in the vault. He reported that Jane O'Connell from the NYSDEC arrived on location at approx. 11:45 hrs. He also reported that Chris Haas from the NYCDEP was on location at approx. 12:00 hrs. lab sequence # 02-07760-001 PCB 3 ppm 8/20/02 18:00 J. Gnall # 195 I&A supervisor reports that at this time a partial cleanup has been completed. A final cleanup will be done when the unit is removed. A tanker removed 200 gallons of oil from the transformer & 340 gallons of water/oil mixture from the vault. They also cleaned up the sidewalk & mailbox that had oil on it. All were double washed with slix. & rinsed off with flush truck. Note: The tree was checked & no oil was found as per L. First The city to do a follow up. Update 8-21-02 @ 03:00 E Higgins #18537 reports that the cleanup is complete as of 03:00. Aprox 2 yards of solids (ppe and debris) removed. Double washed with bio-gen and flushed. The transformer was drained of 200 gallons of oil. Draining of the transformer removes the source of the spill. Prior to the final cleanup the transformer was removed. "

 DEC Memo: "02/12/21-Hiralkumar Patel. 1:22 PM:- spoke with Elizabeth. she mentioned while excavating for a SOE at a site, that is being remediated under BCP case # C231139, a previously unknown 850 gal tank was found beneath the West 29th Street sidewalk adjacent to the property. the tank was found with approx. 2 inches of residual product in it and dime size hole in lower portion of the tank. PAL Env. removed the tank and the concrete pad beneath the tank. Elizabeth mentioned that the tank/concrete bottom was noted at 10-12 ft bg and additional 5ft of soil will be excavated for SOE installation. approx. 8 ft by 1 ft area of stained soil with max. of 30 ppm on PID was noted in the excavation. case assigned to DEC MacCabe, BCP project manager. 1:35 PM:- sent email to DEC MacCabe and informed him about spill assignment. email copied to DEC Austin."

Site Description:

"Location The 29,315-square-foot (0.67-acre) site is within the Chelsea neighborhood of Manhattan; bearing the addresses 241-251 West 28th Street and 240-250 West 29th Street. The site is bound by West 29th Street to the north, a 13-story commercial office building and a 12-story commercial office building to the east, West 28th Street to the south, and a five-story industrial manufacturing building and a seven-story public institutional building to the west. Current Zoning and Land Use The current zoning designation is M1-6D, which permits residential, commercial, and industrial uses. The current surrounding parcel uses are a combination of residential, commercial, industrial, and institutional. The site consists of a vacant, open-air, asphalt-paved lot surrounded by buildings to the east and west and construction fencing to the north and south. Past Use of the Site The site has been occupied by commercial and industrial facilities as early as 1890. Past site uses included a lumber yard (circa 1890), a fur processing and cleaning company (1927-1934), an auto repair facility (circa 1934), garages with petroleum bulk storage (1930 to 2011) and parking facilities with hydraulic lifts and suspected hydraulic USTs (1920-2014). Six 550-gallon USTs on the site were closed in place in 1999. Available records do not indicate that any remediation took place. The site was assigned a NYC restrictive E zoning designation in April 2011 for hazardous materials (E-137), air quality, and noise (E-276). Site Geology and Hydrogeology Subsurface stratigraphy at the site consists of historic fill underlain by native soil consisting of silt, sand, gravel, and boulders overlying bedrock. The fill extends to varying depths ranging from about 3 to 20 feet below grade and generally consists of loose, black-to-gray-to-brown, fine-to-coarse sand, with varying amounts of gravel, silt, rock fragments, brick, tile, concrete and ash. Mica schist bedrock was encountered at depths ranging from about 21 feet below grade in the southern portion of the site to 63 feet below grade near the northeast corner. Groundwater depth ranged from about 15.8 to 17.4 feet below grade. Regional groundwater is inferred to flow 0.75 miles west toward the Hudson River, following the influence of local topography. "

Env Problem:

"Nature and Extent of Contamination Soil No volatile organic compounds (VOCs) were detected above UUSCOs. Site soil contamination is primarily associated with historic fill present across all or most the site. Poly-cyclic aromatic hydrocarbons (PAHs) a type of semi-volatile organic compounds (SVOCs) that are a by-product of fossil fuel combustion were observed within the historic fill. Eight PAHs were detected above unrestricted use soil cleanup objectives (USCOs). Five PAHs were detected above their respective restrictive residential SCOs (RRSCOs) of 0.33 parts per million (ppm), 1 ppm, 1 ppm, 1 ppm and 1 ppm at the stated maximum concentrations; 3-methylphenol/4-methylphenol (0.66 ppm), benzo(a)anthracene (52 ppm), benzo(a)pyrene (34 ppm), benzo(b)fluoranthene (51 ppm) and benzo(k)fluoranthene (52 ppm). The metals cadmium (11 ppm), chromium (130 ppm), copper (470 ppm), lead (1,200 ppm) and mercury (2 ppm) were detected in one or more locations above their respective RRSCOs of 4.3 ppm, 110 ppm, 270 ppm, 400 ppm and 0.81 ppm. PCB concentrations did not exceed RRSCOs. No pesticides were detected above their respective UUSOs. Soil samples were collected and analyzed for 1,4-dioxane and PFAS. 1,4-Dioxane was not detected in any soil samples. Up to fourteen of the NYSDEC 21-list PFAS compounds were detected in 12 soil samples. Total detected perfluorooctanoic

acid (PFOA) and perfluorooctanesulfonic acid (PFOS) concentrations ranged from 54 parts per trillion (ppt) and 1,560 ppt. Groundwater Four VOCs; tetrachloroethene (9.6 parts per billion (ppb)), trichloroethene (13 ppb), chloroform (51 ppb) and toluene (14 ppb) were detected above their respective ambient water quality guidance values and groundwater values (AWGS/GVs) of 5 ppb, 5 ppb, 7 ppb and 5ppb. Phenol (8.5 ppb) was the only SVOC detected above its AWGS/GV of 1 ppb. PCBs were not detected in any of the groundwater samples collected during this RI. 1,4-Dioxane was not detected in any groundwater samples. Up to sixteen of the NYSDEC 21-compound list of PFAS were detected in six samples. Total PFOA and PFOS concentrations were detected from 144 ppt to 198 ppt. Only naturally occurring metals were detected above their AWGS/GVs. Soil Vapor Three VOCs; tetrachloroethene (1,370 micrograms per cubic meter ( g/m3)), trichloroethene (602 g/m3) and methylene chloride (268 g/m3) were detected in on-site soil vapor at the maximum concentrations stated. It is noted that these VOCs were not detected soil or groundwater samples obtained from the site and, therefore indicate an off-site source of the soil vapor impacts."

Health Problem:

"Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there is no onsite building, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However the potential exists for the inhalation of site contaminants due to soil vapor intrusion offsite and for any future onsite development. "

DEC Memo:

"Case started as a TTF on March 13, 2012 On May 30, 2012 Sangesland spoke to property manager (Pedro Martin 212-868-3888). He said there is a 5,000 gal #6 tank that has some contamination issues (he didn't know details). Owner hired Riteway Tank to deal with the problems. Sangesland sent an e-mail to both David at Riteway and Veronica Zhune to ask them to work together on this site. Unknown if tank is being repaired or closed/removed? 5/29/2012 Sangesland got an e-mail from David Chan at Riteway. He said they just got a signed proposal back from the owner. They will move forward with additional sampling and work in the next few weeks. 7/6/2012 Sangesland received an e-mail from Riteway: Sampling was performed this past Monday we core drilled through the bottom of the tank to retrieve samples. The samples returned dirty (verified onsite via PID). Ground water is at the tank, as soon as we core drilled through the bottom, water rushed in. We are currently writing an action plan for Veronica. We propose to IMMEDIATELY cut/install perforations on the interior of the tank of various sizes and at various heights to minimize the spreading of the contamination and to aid in the migration of loose product back into the tank. We are working on a delineation proposal for the client. Due to the location of the tank (buried in the basement), To perform an accurate delineation may be extremely difficult, if not near impossible. Access to the area is limited, especially when trying to get geo probe equipment onsite. 7/27/2012 - Sangesland sent this message to Riteway today after a site visit: Earlier today I inspected the basement of 245 West 29th St and discussed the project with Joe Ostrowski. Based on the inspection and discussion, the NYSDEC is requiring two tasks to be completed before the tank can be closed in place. 1) The NYSDEC requests that several additional holes be drilled in the sidewall of the buried tank to allow groundwater (and petroleum) to freely flow back into the tank. This liquid should be pumped out weekly for a period of 4-6 weeks. An inspection should be made of this liquid to determine what percentage is petroleum. 2) Two additional soil borings need to be drilled through the basement floor at a location approx 8 feet North of the buried tank and another 8 feet South of the buried tank down below the Groundwater level in the area. A soil sample should be taken at the Groundwater interface level and tested for VOC's and SVOC's per Methods 8260 & 8270. Based on the results of these two tasks, the NYSDEC may require additional work, or may close the case out and allow the existing tank to be closed in place. Please provide a short writeup of the results of this investigation. Thanks, SS

\*\*\*\*\* 10/26/2012 Sangesland spoke to David Chan at Riteway. He tried to take soil borings around the tank as requested. He hit refusal at about 6ft. He got minor hits on some VOCs. Slots were cut in the buried tank and they have pumped out several hundred gallons of water from the tank about 6 times over the last 1-2 months. Visual inspection of this water shows no oil. Riteway will return one more time to take a water sample and do a sniff test. If the sample smells

at all, a sample will be sent to the lab.

11/27/2012 Sangesland spoke to David Chan at Riteway. He said they put slots in the existing buried tank and have pumped out groundwater from the tank several times over the last month. The water appears clean and there is no oil mixed in. Based on this information, DEC has approved closing the spill case and allowing the property owners to go ahead with closing this tank and constructing a new tank. "

Remarks: "test failure, no loss of product, tank has been pumped"

 DEC Memo: "12/23/16-Zhune spoke to Paul Pedevano from ESF Transport. Paul said Faulty equipment (bad gage) caused the tank overfilled. Approximately 4 to 10 galloons of #4 fuel oil came by the vent pipe and spilled onto the sidewalk. Some oil came by the tank and it went onto the floor of the tank room. Zhune spoke to the super and as per the super the driver did not wait for the super to check the gage together. He connected the hose to the fill port and overfilled the tank. As per the super the spill is more than 10 gallons. ESF Transport is on the way to clean the spill 1/19/17-Zhune spoke to Paul Pedevano. Paul said the spill was cleaned. 1/19/17-Zhune spoke to Robert Teran (superintendent of the building) 347-692-6372. As per Robert Metro oil cleaned the spill the same day. Spill Closed. "  
 Remarks: "Spill to the pavement. Clean up in progress."
