closed prior to Mar. 1991 other spills #: 8804707, 8901091, 9504121 spill # 8804707 was reported on 08/29/1988 by USCG due to petroleum patch. case closed. spill # 8901091 was reported on 05/04/1989 due to tank test failure for eight (8) 550 gal jet fuel tanks. case closed. spill # 9504121 was reported on 07/06/1995 by USCG due to 40 gal jet fuel spill result of collision between two helicopters. case closed. reviewed documents on e-docs for PBS: - 12/18/1988: tanks 9 to 16 (550 gal jet A fuel) were passed - 12/07/1991: tanks 1 to 8 (550 gal jet A fuel) were passed - 06/11/2007: N. D. Eryou sent letter to DEC Falvey. he mentioned that the eleven (11) 550 gal USTs owned by Port Authority and they were conveyed with the land lease to NYS DOT (Aviation Division). he was not present during tanks abandonment in 1997, but believed that NYSDOT was going to remove the USTs as part of the stormwater upgrades that were underway as part of the immediate adjacent Route 9 upgrades. 10/27/14 TJD File review. Based upon summarized review discussed above - (8) 550 gallon UST's passed tightness tests (Tanks 9 to 16) prior to reported spill (1988). Remaining (8) 550 gallon UST's (Tanks 1 to 8) passed a tightness test subsequent to reported spill (1991). As per PBS inspection 1/9/07 (Falvey) all UST's have been permanently closed on site. New 8K AST's are currently in operation at this facility. A total of (3) spill reports have been reported and closed at this facility since initial TTF report. Unknown what tank # failed the tightness test, however, all UST's are reported out of service. Due to proximity of the failure to the Hudson River if a significant petroleum discharge had occurred impacts to the adjacent surface waters would have been observed. No further action is required at this time. Spill is administratively closed."

Remarks: "550 GALLON TANK FAILED HORNER EZY CHECK WITH A LEAK RATE OF .179GPH, TANK #8, PARTIALLY PUMPED OUT TANK, WILL FINISH PUMPING TANK LATER TODAY."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was M TIBBE 6/8/05 - Project transferred to TLGibbons in Central Office, Albany 8/16/05 - Spoke with Brenden Keany, Mutual Redevelopment Houses, Inc., (212) 675-3200. Spill reported 5/23/96 by CDM during removal of twelve (12) 20,000 gal. #2 and #6 fuel oil USTs. The large fuel usage was for a cogen plant which generates electricity for ~3,000 people. After removing tanks and cleaning, went to dual fuel system, reinstalling only six 20,000 gal. #2 fuel oil USTs. Spoke with David Marabello (732-225-7000), CDM project manager during spill. He said that they excavated to the lateral and vertical limits possible, using shoring, without compromising structure of building. Southern portion of excavation encountered bedrock. Sixteen post-excavation samples were collected and evaluated for VOCs and SVOCs. All samples greater than 10 feet bgs. Elevated levels of VOCs and SVOCs were encountered in several samples, however, according to 10/2/98 CDM tank closure report, levels not indicative of gross tank failure, rather indicative of chronic spills over time. While some sporadic elevated levels of petroleum remain, everything that was reasonable to be done, was done. Close spill. "

Remarks: "OLD TANK APPEARED TO HAVE FAILED. TANK IS BEING REMOVED, CONTAMINATED SOIL WAS FOUND DURING REMOVAL PROCESS. INVESTIGATION IS UNDERWAY AT THIS TIME."

Department understands that a recovery system is operating, that  
monthly VEFR is being performed and that quarterly monitoring is  
currently being done at the following five sites: Amsterdam Houses  
Elliott Houses Manhattanville Houses Melrose Houses Baruch Houses  
Since wells at these five sites have consistently (based on quarterly  
reports received over the past year) had no product, a sheen or less  
than 0.08 inch of product in their wells, the Department would like  
NYCHA to temporarily cease operation of the systems and VEFR at these  
sites. For the next 4 months, the wells must be monitored to  
determine if any significant recharge of product occurs. Accurate  
readings of product thickness must be made, which may require using

the gauging method used at South Jamaica Houses on May 19, 2014. In addition, during this 4 month time period, no absorbent socks should be placed in the wells. Data from this monitoring, along with recommendations, must be included in the 2014 3rd quarter monitoring report for these sites, which is due to the Department by October 1, 2014. In the event that a significant recharge is noticed in any of the wells during these 4 months, the Department must be contacted immediately (within 72 hours of gauging). 1/24/17: J.Kann - based on review of Quarterly monitoring reports, The source of petroleum has been removed. The PRS was operated between 1998 and 2014 Free product has not been observed in the accessible monitoring wells since 2007. Since halting the PRS in 2014, free product has not been observed in the accessible monitoring wells and little free product (less than 0.25in) has been observed in the recovery wells. No petroleum related VOCs or SVOCs (listed in Table 3 of CP-51) were detected in groundwater samples collected in April 2015 from the accessible monitoring wells. As per Randy in a discussion of January 20, 2017 if less than 0.25 inches of No. 6 oil has been in on-site wells for 2+ years and contamination has been delineated all around the impacted area and there is nothing off-site and no dissolved phase in wells, spills can be closed. The Closure Letter should contain the contaminated soil clause. Spill closure email will be prepared with contaminated soil clause and sent to NYCHA "

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

retest. 8/20/15-Zhune responded to this spill. Met Superintendent Mr. Sampson. As per Mr. Sampson he noticed oil spill in the tank room and adjacent rooms and he notified his supervisor. During my inspection I observed a pool of oil in the tank room, oil in the floor of the adjacent rooms (boiler room and a Jeen room) and oil in two drains. The manager of the building hired Riteway. Riteway will pump out the tank and will clean the spill. 8/21/15-Mr. Sampson emailed pictures and the following email: Rite way pump out all the Oil out of the tank and the Tank room to there are Coming back today to do A isolation test and clean up more. 9/4/15-Zhune called Mr. Sampson. Mr. Sampson said Rite Way cleaned the tank room, the oil outside the tank room and the oil in the sump. They will come back to complete the cleanup but the building need to repair a water leak. They found out the line was leaking. They are in the process to get the permit to repair the line. They found the tank in good condition. 9/9/15-David Chan sent the following email The site has been cleaned up, we remediated in total approximately 5 drums, and pumped out about 2000 gallons of oily water (there was very little oil, it was mostly water, I believe the water was a pre-existing condition there). The leak was a faulty fill (it was repaired by others). I am waiting for documentation. Once I have everything prepared I will send over. 9/17/15-David Chan sent the following email Riteway will be performing the repairs to the fill line. We are scheduled to begin the work this coming Monday on 9/21/2105. 9/28/16-Robert Hill sent the following email. Riteway Tank replaced the fill line at 305 7 Avenue, NYC. All the lines were above ground. Can I put oil back into the tank or do I need to perform a system test. Please let me know ASAP. My customer would like to fill their tank. 10/19/15-Riteway sent the spill closure report dated 10/5/15. the letter stated the tank was pumped out and the oily water in the room was vacuumed up. the two (2) drains and one (1) sump was pumped out and cleaned with bio-degradable degreaser as well. Riteway proceeded to trouble shoot the issue by isolating the tank and testing the lines. The tank only passed the test. The cause of the spill was a slow leak on a faulty fitting on the fill line. The fill line is above ground and the tank room floor is sound concrete. Riteway Tank Maintenance Corp performed the repairs to the fill line. The entire area was remediated until free from contamination. A total of 2500 gallons of liquid and 6 drums of impacted material was remediated. the site is cleaned. Spill closed."

Remarks: "Test failure. Observed wet leak. Repair being planned. Cleanup is pending."

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.
